ABSTRACT

PROBLEM TO BE SOLVED: To provide an electronic account settlement method, capable of surely charging a caller who originates a call from a terminal for communication by each communication via a public line network.

SOLUTION: In this electronic account settlement method for settling the charge of the communication performed between the terminals via a public network, the call is originated from radio telephony equipment 1 to an electronic account settlement device 2 and an electronic account settlement destination account is specified. Authentication is requested from the electronic account settlement device 2 to the **credit card** company **electronic account settlement** device 3 of the account, to perform electronic account settlement; the input of the telephone number of a call termination destination is requested from the electronic account settlement device 2 to the radio telephony equipment 1, when the authentication is performed, and the telephone 6 of the call termination destination is called from the electronic account settlement device 2, when the telephone number of the call termination destination is inputted. When the communication of the radio telephone equipment 1 and the telephone 6 of the call termination destination is ended, a communication charge is billed from the electronic account settlement device 2 to the **credit card** company **electronic account settlement** device 3.

ABSTRACT

PROBLEM TO BE SOLVED: To provide a method with which electronic account settlement is enabled while using a password number just once for electronic mail.

SOLUTION: Generally, a **credit card** is used for **electronic account settlement** but there is uneasiness because it is watched in on-line mode. Therefore, the password number just for one transaction is sent through two routes to an electronic account settlement financial institute 4 without

using any credit card and using any conventional password number as well. Namely, transfer is executed through collation while directly turning one route from the destination to order to the electronic account settlement financial institute 4 and directing the other route from an ordering person 1 through the destination to order to the electronic account settlement financial institute 4. In this case, the electronic account settlement can be safely performed with easy level-up of system by automatically generating a password number, which can be decoded only by the electronic account settlement financial institute 4, or automatically converting it in case of retransmission. Besides, any account settlement institute such as the provider of internet or a credit card company, which completes a procedure for automatically transferring the payment of client, except for the electronic account settlement financial institute 4 can become a paying institute for the electronic account settlement of ordering person 1.

Abstract (Basic): JP 2002024747 A

NOVELTY - A store server (30) requests the issuance of receipt to the receipt issuing unit (52) of an authenticating server (50) if payment is made to a payment server (40) via a user terminal (10). The published receipt is then supplied both to the user terminal and a storage server (60).

USE - For e.g. transferring account from one bank to another, on - line credit card payments .

ADVANTAGE - Enables highly-efficient issuance of electronic receipts while enabling modifications to be made on the issued receipt if necessary.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the electronic commerce system. (Drawing includes non-English language text)

Abstract (Basic): KR 2001091000 A

NOVELTY - An Internet cash card, cash purse and automatic teller machine(ATM) for Internet cash, and method for paying, inquiring and transferring money over Internet is provided to allow users to purchase products and pay money for such purchase over both real environment and network environment.

DETAILED DESCRIPTION - An Internet cash card(2) is authenticated by an authentication algorithm compatible with a cash card in accordance with the account database stored in an Internet cash bank(8) and a real bank(14), and operations of payment, inquiry and money transfer are carried out by the approval of the Internet cash bank and real bank. An Internet cash purse(24) stores Internet cash and Internet cash card, and is authenticated by an authentication algorithm compatible with a credit card/cash card in accordance with the account database stored in the Internet cash bank and real bank. An automatic teller machine(4) for Internet cash is connected to an **Internet cash bank**, real bank and **credit card** company, and issues Internet cash cards authenticated in accordance with the compatible authentication algorithm of a credit card/cash card. The automatic teller machine for Internet cash requests an approval for payment, inquiry and money transfer for the Internet cash card, to the Internet cash bank and real bank, and performs such operations as payment, inquiry and money transfer over a network environment in accordance with the result of the request for approval.

Abstract (Basic): US 20020002533 A1

NOVELTY - The customer information is provided to a **bank card** authorization **network** from the **payment** system (12) on receiving a transaction request from a customer. The authorization network provides a payment to merchant to pay for the transaction.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) Bank card information storing method;
- (b) Customer-merchant transaction facilitating apparatus

USE - For facilitating transactions to merchant, using bank cards such as charge cards, debit cards, check cards and merchant cards, of customer.

ADVANTAGE - Enables a customer to receive a service or a product from a merchant without disclosing the name, address, private data and credit information of the customer to the merchant. Improper dissemination of private information of customer, is minimized by minimizing number of people, businesses and the institution which have access to the private information.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of payment system.

Abstract (Basic): WO 200205192 A1

NOVELTY - The method involves receiving enrolment information from a user for an **on - line payments** service. The user's designation of a source **account** is received for **withdrawing funds** for the **on - line payments**. A **transaction account** is provided for the user as a money **deposit account** with an **account** number that the user can use as a source and a destination of **funds** and with at least one of several service levels. The user is allowed to have **funds** reside in the **transaction account**.

The user is allowed to use the **funds** residing in the **transaction account** for at least one of making an **on - line payment**, making an **on - line** purchase, making an off-line purchase, making a **cash withdrawal**, making a credit **account payment**, making a **bill payment** or making an international **payment**.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for a system for making **on - line payments**.

USE - For **e-commerce**.

ADVANTAGE - Allows **payments** to be made using any credit card, **checking account** or **savings account** to facilitate an **on - line transaction**. User can view all financial information in one go.

Allows **Internet bill paying**.

DESCRIPTION OF DRAWING(S) - The figure shows key components and the flow of information between key components for a person-to-person **payment**.

Abstract (Basic): JP 2001265932 A

NOVELTY - A payer (X) inputs transfer money with predetermined information to an input unit (a). An interest for the transferred money, is calculated for preset number of days, based on input information. A reimbursement determinator (c) calculates reimbursement money based on calculated interest amount. A payment execution unit (i) maintains data about transfer money paid within payment day to recipient's account.

USE - For settling accounts in financial institution e.g. ATM bank, point-of-sales system and in grocery shop.

ADVANTAGE - Simplifies payment process with high efficiency and reduces cost of account settlement system.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of account settlement system. (Drawing includes non-English language text).

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
JP 2001216442	A	3	G06F-017/60	

Abstract (Basic): JP 2001216442 A

NOVELTY - A financial institution sets a fixed amount for financial account of an electronic memory medium and provides an account number for the electronic memory medium. An electronic commercial transaction is settled using the memory medium, until the set fixed amount becomes zero.

USE - For electronic commercial transactions in financial institution through internet, using credit card, money card like debit card.

ADVANTAGE - Since separate account number is provided for each electronic memory medium by the financial institution, the fraud and illegal exploitation of the card number is avoided. As the fixed amount is set to each medium, it is arbitrarily sold as goods for unspecified persons. The number input operation is avoided and hence it is easy to use.

AU 200073409 A G06F-017/60 Based on patent WO 200116845

Abstract (Basic): WO 200116845 A1

NOVELTY - A computer workstation has display screen and input device. A database stores insurance rating information and underwriting rules for insurance carrier. A communication network interconnects workstation with database and application server (232) including application interface, quote generator, display generator, policy issuer and billing generator.

DETAILED DESCRIPTION - The database has insurance rating information and underwriting rules stored for insurance carriers. The application server has application interface which generates initial and subsequent prompts at workstation for the user to input client data associated with specific client. The prompts are dynamically generated

as a function of previous client data input at workstation. The quote generator generates data representations including rate quotes of the candidate policies of selected insurance product type from several insurance carriers. A display generator displays candidate policies for comprises of several policies and preferred policy is selected by the user using input device. The policy issuer issues policy corresponding to preferred policy and billing generator generates electronic billing schedule corresponding to issued policy and stores in data base.

INDEPENDENT CLAIMS are also included for the following.

- (a) Insurance transaction processing method;
- (b) Insurance transaction conducting method

USE - In e.g data driven automated insurance transaction processing system for processing transaction related to new or existing insurance policies across a remote communication network by user in computer and network based business application systems.

ADVANTAGE - Provides highly automated distributed computer system for dynamically accepting user information. Enables computer to access to third party **financial institutions** to allow **electronic transfer of funds** and **credit card payments** facilitating bill and claim related payments. Allows real and near real time updating of product information.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of insurance processing system.

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
KR 2001000859	A		1 G06F-017/60	

Abstract (Basic): KR 2001000859 A

NOVELTY - A system for daily lottery through the internet is provided to purchase a lottery ticket from only an internet terminal, to select the ticket number, and to check the lottery result at once.

DETAILED DESCRIPTION - A customer using internet terminal(1) accesses an internet server(2) of internet lottery web site and registers in the lottery web site by inputting a his or her identification and a **credit card** number or an **account** number for **electronic settlement**. After registration, the customer selects a number of lotteries and lottery number. A settlement server(3) performs payment settlement for the lottery or lotteries. An automatic calculating part(4) updates daily sales amounts of the lottery and prize amounts of the lottery depending upon the sales amounts by hour base. A drawing part(5) draws winning numbers of the day once a day. A traneceiver part(6) informs winners of the lottery of the winning

results by an e-mail or a character message. The prize money is received in accounts of the winners by the settlement server(3).

AU 200143014 A G06F-017/60 Based on patent WO 200139093

Abstract (Basic): WO 200139093 A1

NOVELTY - Transaction details are stored on a database. These details include a desired amount of money to be sent. A code is established that corresponds to the transaction details stored on the data base. This code is entered into an electronic transaction fulfillment device e.g. automated teller machine in communication with the database to retrieve the transaction details from the database. The transfer then proceeds if the code is verified.

USE - For performing money transfer transaction through a financial services institution.

ADVANTAGE - Allows user to make transfers from any location.

DESCRIPTION OF DRAWING(S) - The drawing shows a schematic diagram of the system.

AU 200046902 A G06F-017/60 Based on patent WO 200067178

Abstract (Basic): WO 200067178 A2

NOVELTY - An account identification data is provided to on-line debit account having a predetermined amount of money. A vendor (14) is allowed to deduct an amount less than or equal to the amount in the account, using the identification data.

DETAILED DESCRIPTION - The account is issued by opening the account using the identification on broker server which does not contain any information associated with the user. A request including amount of funds to be included in the account is received from a user. The reception of funds are verified and the account identification data is provided to the user, when the funds have been received. INDEPENDENT CLAIMS are also included for the following:

- (a) item selling method;
- (b) anonymous account issuing method for user and consumer;
- (c) transaction processing method between consumer and vendor;
- (d) transaction processing system between consumer and vendor;
- (e) item purchasing system;
- (f) data processing system

USE - For anonymously purchasing goods or services on internet, in financial transaction system such as banks using on-line sending business models such as cybercash, digicash, E-cash, netbill, millicent, first virtual moldings, E-change and using credit cards and bank issued debit cards.

ADVANTAGE - Provides consumers the ability to spend on-line easily, safely, anonymously, in small or large increments with no personal attachment to internet service providers, billing, credit card or banking institutions. Creates opportunity for consumers to purchase goods or services over the internet anonymously, without need for special software, special hardware, **credit cards**, **bank accounts**, home telephone, **e-mail address**, personal **bills** or billing address. Enables large number of existing and potential Internet consumers without requiring any changes to their current PC set-up or changes to the way in which consumers customarily behave and conduct business transactions.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of brokered anonymous internet payment system.

Abstract (Basic): CA 2262212 A1

NOVELTY - An electronic credit account database receives a signal

representing a payment made, plus the predetermined added amount for credits to a particular credit card account.

DETAILED DESCRIPTION - The database system includes a processor (10) for receiving pre-authorized credit card payments transferred electronically from bank accounts of credit card holding customers. The processor operates to add a predetermined amount to each payment received. An electronic credit account database (18) receives a signal from the processor, which represents a payment made plus the pre-determined added amount for credits to the particular credit card account concerned.

USE - Electronic database systems operated by or on behalf of a merchant for recording transactions by customers using credit cards issued in the name of the merchant.

ADVANTAGE - Provides mechanism for recording transactions by customers using credit cards issued in the name of a merchant.

DESCRIPTION OF DRAWING(S) - The drawing shows a diagram of an electronic database system of the invention.

Abstract (Basic): JP 2000268097 A

NOVELTY - A key generation apparatus generates encryption and decoding keys. A store apparatus encrypts the electronic information with the generated encryption key and delivers the encrypted information to a customer apparatus by simultaneous broadcast. The customer apparatus chooses a decoding key corresponding to the electronic information and decodes the encrypted information.

DETAILED DESCRIPTION - A key ID identifies the pair of encrypted and decoding keys generated. The encryption and decoding are repeated with different keys. An INDEPENDENT CLAIM is also included for secured electronic transaction program.

USE - In credit card companies for account settlement in internet shopping.

ADVANTAGE - Encryption is given to payment indication data, so that only settlement of account person apparatus is known, thus customer apparatus can hide the relevant information corresponding to settlement of account, resulting in secured privacy protection to the customer.

DESCRIPTION OF DRAWING(S) - The figure shows the system

illustrating the electronic transaction procedure.

Abstract (Basic): US 6105001 A

NOVELTY - A commission management processor (27) connected to an electronic database (28) is operated based on transaction data from a purchase processing terminal (12), to record the business volume value in a member record. Based on the values recorded in other member records and member relating positional data in the hierarchy, a commission value for the member is determined and monetary payment is effected.

DETAILED DESCRIPTION - The electronic database is organized to contain member records each identifying a bearer of non-cash payment device. A hierarchy of relationships among the member records is established and positional data is stored in association with the member records. The purchase processing terminal is operated to record a purchase by one of the members bearing a non-cash payment device. The transaction data is then electronically transmitted to the commission management processor.

USE - In **electronic fund transfer** systems and non- **cash point** -of-sale transaction system for managing purchase transactions and for distributing purchase commissions among distributor and users of non-cash point-of-sale transaction systems.

ADVANTAGE - Reduces promotional costs associated with attracting and maintaining card holders. Because the members of the organization would be motivated to use the organization's payment vehicle in preference to other payment vehicles, and since the members would also

be desirous of achieving the requisite personal business volume to qualify for increased commissions, the members are more likely to make purchases with merchant participants. Enables merchant to obtain increased marketing efficiency by directing promotional material to audience that is readily motivated to make purchases from the merchant. Since aggregate purchase data relating categories of goods purchased by each member can be maintained by the commission management system, merchant to achieve greater promotional efficiency by targeting his or her marketing material to particularly receptive members is allowed.

DESCRIPTION OF DRAWING(S) - The figure shows the functional block diagram of transaction system.

Purchase processing terminal (12)

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
JP 2000250979	A		12	G06F-017/60	

Abstract (Basic): JP 2000250979 A

NOVELTY - The virtual store apparatus enables a visitor to purchase at once from virtual stores and to perform selection designation of goods. If the visitor indicates payment by credit card, the prices of the purchased goods are added and it will be judged whether payment of the total by credit card is recognized. The sales process of the purchased goods will be performed if settlement by credit card is recognized.

DETAILED DESCRIPTION - A list of goods sold at each of several stores registered as virtual stores is displayed for every store.

USE - None given.

ADVANTAGE - Reduces shopper's burden since goods can be purchased at once from several **virtual** stores and **accounts** can be **settled** with **credit card**.

DESCRIPTION OF DRAWING(S) - The figure shows a block diagram of the tenant management system.

Abstract (Basic): EP 935224 A2

NOVELTY - A financial information and transaction system comprises of a host financial computer system, at least one terminal providing a user interface for accessing the host financial computer system, a smart card interface device, and a smart card. The host system is used to maintain records of user account information. The host financial computer system includes a device for transmitting and receiving data corresponding to the user account information.

DETAILED DESCRIPTION - Access to the records, in the smart card, of user account information are organized in a hierarchy of three or more levels. The hierarchy of three or more levels comprises an initial level, a final level, and one or more intervening levels. The records of user account information are accessed by passing through the hierarchy of three or more levels, and where an interface device is provided for allowing access to the final level in the hierarchy by an automated task without passing through one or more intervening levels.

USE - For **smart cards** to make **transactions** such as e.g. **deposit funds**, withdraw funds, exchange currency, transfer funds, purchase or sale stock.

ADVANTAGE - Permits the customer to establish a personal navigation path that will convey the customer directly to one or more desired menu screens. Present invention can be employed in conjunction with ATM devices, home banking terminals, and other terminals which permit the use of smart cards.

DESCRIPTION OF DRAWING(S) - The block diagram shows a financial information and transaction system in accordance with the invention.

AU 9919995 A G06F-015/00 Based on patent WO 9931600

Abstract (Basic): WO 9931600 A1

NOVELTY - The apparatus includes a host computer remote from a slave unit with a data input device and printer. The host and slave may be connected by way of a dial connection, wireless link or the internet. A customer enters the desired monetary amount and method of payment for the transaction and the slaves' processor communicates this to the host. The host returns data and commands that allow the slave to print a transaction document. The transaction documents are preprinted with a logo and are free from recurring form data.

USE - For processing financial transactions, especially purchasing and producing money orders and prepaid telephone cards, and **paying bills** remote from **banks** using **e.g. cash, credit card, electronic benefit transfer (EBT) card, and debit card.**

ADVANTAGE - Increases security of operations so that it is less easy to fraudulently cash in stolen transaction documents as they do not carry the unique printed data from the host. More convenient method of acquiring transaction remote from a bank.

DESCRIPTION OF DRAWING(S) - The drawing shows the stock sheet (transaction document) after printing.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
US 5852812	A	26	G06F-017/60	

Abstract (Basic): US 5852812 A

The method involves receiving a notification of the transaction by a host data center (A). A first local currency for **billing the credit card account** of the **network customer** (10) for the transaction is then determined.

A transaction charge price expressed in terms of the first local currency is calculated by applying a currency exchange rate to a stored price expressed in a second currency differing from the first currency

followed by transmitting the calculated price to a credit processor by the host data centre.

ADVANTAGE - Facilitates handling issues of high-volume scalability and response time by using number of techniques. Alleviates performance problems since ability to run many tasks simultaneously within windows NT operating system is realised. Provides high throughput thereby facilitating customers to notify charges of their account via on-line statements.

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
JP 10187845	A	4	G06F-019/00	

Abstract (Basic): JP 10187845 A

The method involves sending the data required for change from an orderer (1) to a financial institution (4) by electronic mail. The data are sent together with a recitation number and an account number. The purchase order contents and the recitation number are sent to an order tip (5) by electronic mail.

The order tip sends the recitation number from the orderer to the financial institution by electronic mail to double check. A change process is performed after the payment request is confirmed with the recitation number that passed from the orderer through the order tip to the financial institution.

ADVANTAGE - Performs safe **electronic settlement of accounts** by **electronic** mail with using **credit card**.

The system has a first memory (11) that stores card data. An input unit (6), a second memory (10) and a display unit (5) inputs, stores and displays a predetermined data, respectively. The predetermined data is transmitted as an infrared signal by an infrared communication unit (7). A card data indicated by a transmitting instruction is read from

the first memory, and sent via the communication unit. An data on the money processing result is received by the communication unit, stored by the second memory and shown as a table by the display unit.

A control unit (8) reads the data on the money processing result from the second memory according to an input transmitting instruction, and transmits the read data via the infrared communication unit. The first and second memories, input unit (6), infrared communication unit and control unit forms an data-processing card (4). A money processing apparatus receives and demodulates the predetermined data and card data from the data processing card, does a money processing based on the card data, and sends the data on the money processing result.

ADVANTAGE - Card data can be sent even if card is not inserted into money processing apparatus.

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
JP 9223182	A		7	G06F-019/00	

Abstract (Basic): JP 9223182 A

The method involves inputting the amount of money to the mobile unit (2) of a base station (1) along with a code number. Data is transmitted to a financial institution in which a customer has an account.

The amount is subtracted from the deposit balance or credit balance of the customer together with the interest and service fee **charged** by the **financial institution**. A card e.g. **credit card**, money card, is inserted in the mobile unit of the base station (1), linked to a telephone circuit, to pay for a purchased item in a retail store.

ADVANTAGE - Allows customer to go shopping without bringing money. Does not accumulate cash since purchase payment is turned into account payment. Obtains reduction in accounting expense, cash transfer in bank, and profits on security. Attains full participation of capital circulation to expenditure with respect to transfer of salary. Allows both bank and credit company to collect fees from settlement of account in retail store.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
JP 9097369	A	6	G07F-007/08	

Abstract (Basic): JP 9097369 A

The credit data processor has a CPU (11) which performs all the following computation under a set of control program modules. While operating under the batch mode the days and months are computed according to the set span or interval of the batch. When instalment payment is selected the days and months are divided according to the number of instalments. Then the part payment for each instalment is computed based on the division result. The division payment print controller program generates the required voucher or bill which contains the instalment payment amount and other details.

ADVANTAGE - Simplifies checking of amount indicated in voucher. Printout credit payment due amount corresponding to each batch or single instalment.

Abstract (Basic): WO 9714108 A

The financial information access service is provided via the Internet or other on-line service. A financial card, e.g. credit card (24) is used to make a purchase at a retailer who uses a dial terminal (22) to communicate with an authorisation centre (20). The transaction may be reported to the user's bank (18) or other financial service and can be forwarded to the information access service provider (14).

A user (10) can use a variety of computer interfaces to contact the information access host over the Internet or on-line service. The user can interrogate their own financial transactions and have them downloaded into an accounting package.

ADVANTAGE - Allows users to have up-to-date record of their transactions and incorporate them into other packages.

Abstract (Basic): WO 9406103 A

The method involves detecting fraudulent transactions using a predictive model, e.g a neural network, to evaluate individual customer accounts and identify potentially fraudulent transactions based on learned relationships among known variables. The predictive model is developed from past transaction data, and is stored in a computer.

Current transaction and customer data is obtained, and a signal indicating the likelihood of fraud is generated in response to the application of the current transaction and customer data to the stored predictive model. Reason codes indicating relative contributions of various variables to a particular result may be output.

USE - Detection of fraudulent use of customer accounts and account number e.g credit card transactions .

Patent Details:

Patent No Kind Lan Pg Main IPC Filing Notes

Abstract (Basic): GB 2176008 A

A low volatility airborne material detector has a rotating carrier disc (10), usually made of silica, and an air stream **deposits** the material for analysis through the first segment (12) of the stationary body. The disc carries the material over the second segment (22) which is a pre-stripper where a heated dry purge gas removes the more volatile impurities. The third segment (28) contains an ioniser where a quiet corona discharge **deposits** electrons on the carrier disc which are then removed by a positively **charged** electrode located in the fourth segment (36). The fifth segment (39) has an ion mobility spectrometer with a drift tube to lift ionised material off the disc to be measured **electronically**.

Specifically, the carrier disc (or trap) (10) can also be made of other electrical insulating materials, e.g. quartz, P.T.F. E., perspex, glass, etc.

USE/ADVANTAGE - To study surface contamination of silica substrates use in **electronic** components, to detect drugs or organo nitro compounds, and for plume studies of smokestacks. An ion collection efficiency of almost 100% is claimed using this type of ion mobility spectrometer, detecting down to 1 part in 10 power 15 parts of air.

Detailed Description

Claims

Detailed Description

... all available payment mechanisms, such as a paper check through the ACH system or a **credit card** to the merchant's system. The system for an embodiment of the present invention also includes, without limitation, any other bilateral **payment** process or private **payment** activity between individuals..

The **bill payment** aspect for an embodiment of the present invention integrates **bill payments** into the service and. provides an option, for example, to the recipient 14 of the \$50 gift to use the gift to **pay** the recipient's **bills** . Thus, the recipient 14 can take the \$50 gift and send (inverted exclamation mark)t to the telephone company or electric company or to the recipient's gardener to **pay** the recipient's **bills** , using a **bill payment** service. The **bill payments** aspect utilizes a **bill payment** service either to make the **payment** : directly or to cut a check, depending upon the **payee** of the **bill payment** . The system of the present invention does not necessarily make **payments** directly to a **biller** , for example, but uses and integrates a **bill payment** product of the service provider 20.

20

SUBSTITUTE SHEET (RULE 26)

The system for an embodiment of the present provides major advantages over existing **bill payment** service. In existing **bill payment** services, a user signs up his or her **checking account** as the **funding** source to **pay bills** , and each. month, the user proactively **pays** his or her **bills electronically** . For example, the user goes **on - line** via the Internet and picks the **bills** and the amounts that the user wants to **pay** , and on the same day, the user's **checking account** is debited for the amounts indicated. Thereafter, if the **payee** , such as the telephone company, has a capability to receive an **electronic payment** , the **payee** receives an **electronic funds transfer** made from the user's **checking account** by the **bill payment** provider

international payment through an international payment service with funds in the transaction account according an instruction by the user.

65 The system of claim 34, wherein the means for allowing the user to use the funds in the transaction account further comprises means for allowing the user to utilize a save for later portion of the funds in the transaction account.

66 The system of claim 65, wherein the means for allowing the user to use the funds in the transaction account further comprises means for allowing the user to supplement the save for later portion of the funds in the transaction account with a line of credit associated with the transaction account.

Detailed Description

... of each regular issue of the PCT Gazette.

A SYSTEM AND METHOD FOR CONDUCTING
FINANCIAL **TRANSACTIONS** OVER THE **INTERNET**
Continuina Data

This application claims priority to United States Provisional Application No.

60/157,002...

...The present invention relates generally to a system and method for conducting

Z:) Z:)

financial **transactions** over the **Internet** and, more particularly, to a system and method for iding a line of credit designed only for making purchases over the **Internet**.

provi 1 1

Description of Related Art

The nature of the shopping and purchasing experience has been altered dramatically since the advent of the **Internet**. The growing availability of computers and **Internet** access has induced consumers to use the **Internet** for a variety of purposes. This, in turn, has led to the emergence of a plethora of **Internet** service providers (ISPs), **portals**, and **websites**, many of which offer a broad array of products and services previously available only through stores or cataloars. In response to this market, customers are increasingly using the **Internet** to purchase products.

However, an **Internet** shopping experience differs significantly from a customer's typical purchase **transaction**. There are no stores to visit and no products to handle; there are only **virtual** imacres and descriptions of the products. In addition, a customer purchasing a product at a **website** may not have encountered the merchant before-, indeed, the merchant may not even have a physical store. Further, reports regarding breaches of confidential information, such as **credit card** information, are numerous. These circumstances have produced a hesitancy in the public regarding making purchases over the **Internet**.

1

Recognizing the public's hesitancy, merchants and **financial institutions** have

Z

Z:)

explored various avenues to reassure customers recrardiner **Internet** purchases. For example,

17

there are some products presently available for conducting financial **transactions** over the **Internet**.

JP 41-0063925A describes a system for the **settlement** of two (2) **accounts** with an individual member which can be used only on the **Internet** between a card company and a card member for the purpose of **settling accounts**.

U.S. Patent No. 5,883,810, issued to Franklin et al, shows a digital **online** card with **account** number, which is issued by an issuing institution. Associated with the **account**

1

7

number is a **transaction** number used for **Internet** purchasing
U.S. Patent No. 6,014,650, issued to Zampese, mentions assigning an **account** identifier and associated set of secret **transaction** codes to a purchaser (each **transaction** code is used only once) for **Internet** purchasing

U.S. Patent No. 5,826,241, issued to Stein et al., a cardholder **account** that resides on the front and back end computer and includes a card number, an **Internet** e-mail address, a state, a **pay**-in selection, a **pay**-out selection, and a currency preference.

U.S. Patent No. 6,049,785, issued to Gifford, shows a radio box with an "**Internet Card**" selecting option used for **Internet** purchasing.

However, these products are merely conventional **credit cards**. These cards do little to reassure customers regarding **Internet** purchases. Accordingly, there remains a need for a method and system for making purchases over the **Internet** that provides a customer with an enhanced sense of reassurance regarding the **transactions**.

ID In

BRIEF SUMMARY OF THE INVENTION

It is a feature and advantage of the present invention to provide a novel system and method for conducting financial **transactions** over the **Internet**.

It is a further feature and advantage of the present invention to provide a system and method for making purchases over the **Internet**.

2

It is another feature and advantage of the present invention to provide a system and method for providing a line of credit designed only for making purchases over the **Internet**.

It is a still further feature and advantage of the present invention to provide a...

...and method for providing a line of credit designed only for making purchases over the **Internet** which provides the customer with a sense of assurance regarding the **transactions**.

It is still another feature and advantage of the present invention to provide a system and method for providing a line of credit designed only for making purchases over the **Internet** which provides the customer with a sense of security regarding the **transactions**.

To achieve the stated and other features and advantages, the present invention furnishes a novel...

...and method for providing a line of credit designed only for making purchases over the **Internet**, referred to here as a **click account**. In preferred embodiments of the present system and method, the **click account** will provide a customer with one or more guarantees of customer satisfaction. Such guarantees could...

...In other preferred embodiments of the system and method of the present invention, the **click account** provides financial incentives with the use of the card.

Additional objects, advantages and novel features...

...the invention.

BRIEF DESCRIPTION OF THE DRAWINGS

Figure I is a diagrammatic illustration of an **online** commerce system.

DETAILED DESCRIPTION OF THE INVENTION

Refem'ncr now in detail to embodiments of the invention which provide a novel system and method for a line of credit (click **account**) designed only for making purchases

Z7

over the **Internet** which provides the customer with a sense of assurance regarding the **transaction** .

3

The click **account** is a line of credit for **Internet** commerce. The click **account** is supported by a creditor like a **credit card** , but it is packaged, delivered and supported like a **virtual electronic** credit line. Upon approval by the creditor, a customer is issued an **account** number and an expiration date. Such information is provided for immediate use. A typical embossed plastic **credit card** is not provided, although the click **account** , in a preferred embodiment, can be issued under a **credit card** label to enhance merchant acceptance. An ID card (reference card) can take the place of a traditional plastic **credit card** to provide relevant **account** information as a reference. Thus, the click **account** is not designed for use in typical stores.

Figure 1 shows an **online** commerce system 20 for conducting **online** commerce **transactions** . For general discussion purposes, three participants to an **online** commerce **transaction** are shown: a customer 22, a merchant 24, and an issuing **bank** 26. These three

In

participants play the primary roles in the **online** commerce **transaction** . The customer and merchant may represent individual people, entities, or businesses. Although labeled as a " **bank** ", the issuing **bank** 26 may represent other types of card-issuing institutions, such as

Z:) zn

credit card companies, card sponsoring companies, or third party issuers under contract with **financial institutions** . It is further noted that other participants may be involved in some phases of the **transaction** , such as an intermediary **settlement** institution, but these participants are not shown.

Each participant is equipped with a computing system to facilitate **online** commerce **transactions** . The customer 22 has a computing unit 28 in the form of a personal computer...

...30 implemented in the form of a computer server, although other implementations are possible.

The **bank** 26 has a computing center 32 shown as a mainframe computer. However, the **bank** computing center 32 may be implemented in other forms, such as a minicomputer, a PC

zn

server, a **networked** set of computers, and the like.

The computing units 28, 30, and 32 are connected with each other via a data

In

communication **network** 34. The **network** 34 is a public **network** and assumed to be insecure

4

and open to eavesdroppers. In the illustrated implementation, the **network** is embodied as the **Internet** . In this context, the computers may or may not be connected to the **Internet** 34 at all times. For instance, the customer computer 28 may employ a modem to occasionally

connect to the **Internet** 34, whereas the **bank** computing center 32 must maintain a permanent connection to the **Internet** 34. It is noted that the **network** 34 may be implemented as other types of **networks**, such as an interactive television (ITV) **network**.

The merchant computer 30 and the **bank** computer 32 are interconnected via a second **network**, referred to as a "**payment network**" 36. The **payment network** 36 represents existing proprietary **networks** that presently accommodate **transactions** for **credit cards**, **debit cards**, and other types of financial/**banking** cards. The **payment network** 36 is closed **network** that is assumed to be secure from eavesdroppers. Examples of the **payment network** 36 include the VisaNet.RTM. **network** and the Ven'phone.RTM. **network**.

The **electronic** commerce system 20 is implemented at the customer 22 and issuing **bank** 26. In the preferred implementation, the **electronic** commerce system 20 is implemented as computer software modules loaded onto the customer computer 28 and the **bank** computing center 32. The merchant computer 30 does not require any additional software to participate in the **online** commerce **transaction** supported by the **online** commerce system 20.

There are three distinct phases supported by the **online** commerce system 20: a registration phase, a **transaction** phase, and a **payment** authorization phase. During the registration phase, the customer 22 requests an **online** commerce card from the issuing **bank** 26. The issuing **bank** 26 creates an **online** commerce card for the customer and assigns a permanent customer **account** number to the card. The permanent customer **account** number is retained in a data record at the issuing **bank** 26.

The "**online** commerce card" does not exist in physical form, but in digital form for use in **online transactions**. The issuing **bank** 26 issues the card to the customer 22 in the form of a signed digital certificate binding the customer to the **bank**. The **click account** is configured to be used by the customer in one or more areas of commerce in which the customer typically employs a **credit card**, a **debit card**, a **bank card**, or other type of financial services card.

5

During the **transaction** phase, the customer 22 uses the **click account** number in the **transaction** with the merchant 24.

During the **payment** authorization phase, the merchant 24 submits the details regarding the **transaction** over the conventional **payment network** 36 to the issuing **bank** 26 for approval. The issuing **bank** 26 identifies the **click account** and uses the **click account** number to retrieve the data records regarding the financial **account** of the customer and processes the authorization request using its processing system.

In one preferred embodiment of the present invention, there is a separate **account** maintained for each customer, which **account** is used only for **Internet** purchases. The benefit to the customer is that all **Internet** purchases are identified and separated onto one **account**. This results in a reduction in risk to the customer because his or her main **credit card** is not at risk of being compromised through a **transaction** over the **Internet**. Thus, the present system

C 2

and method provides the customer with enhanced security regarding **Internet** purchases.

Specifically, in a preferred embodiment of the present invention, the creditor provides an **online** guarantee such that if an **account** is ever compromised, the **click account** holder will not be held responsible for **charges** made by persons who are not authorized users. In another preferred embodiment of the present have the option to reallocate his or

her credit line between the main **credit card** and the click **account** .

In another preferred embodiment of the present invention, the ID card will have the following information imprinted on its face: (1) **account** number; (2) expiration date; (3) customer service number; (4) the URL of the issuing **bank** ; (5) "Member since" and date of original membership; and (5) an appropriate logo.

In still another preferred embodiment, because the invention is designed only for **transactions** by means of the **Internet** , the click **account** provides a **Cash** line but no PIN access capability; is not eligible for balance consolidation; and does not provide convenience checks. However, the click **account** does allow for issuance of additional ID cards; is maintained as a separate statement; allows for **on - line** access of the **account** ; and permits line **transfers** from an existing **account** to the click **account** .

6

The click **account** also offers the customer enhanced convenience regarding his or her **Internet transactions** . Specifically, because the click **account** is an **Internet** -dedicated **account** , the customer will have all his or her **Internet transactions** in one place, simplifying record keeping and enhancing security. In a preferred embodiment of the present invention, **on - line**

C

will be available. The customer can go **on - line** to retrieve information **account** management with about his or her **account** from the creditor. Through this **on - line account** management feature, the customer can check his or her balance, find his or her next **bill** due date and

17

amount due, and **pay** his or her **bills** .

In other embodiments of the present invention, a customer, after approval, can obtain this click **account** in one of three methods, contacting the creditor by telephone, contacting the creditor by mail, and contacting the creditor over the **Internet** . In a preferred embodiment, if the customer requests the click **account** over the **Internet** , at the time of requesting the card, he or she will input some basic information and, then if approved, receive in the same **Internet** session within a few moments his or her **account** number with a corresponding expiration date. Upon receiving the **account** number, the customer can then begin to shop on

In

line using the click **account** . Several days later the customer receives a reference card. The reference card is not a **credit card** in the conventional sense; it can't be used in a physical store, has no...

...Rather the reference card is analogous to a frequent flyer program card that lists the **account** number and expiration date. This information can be provided in a variety of ways, for...

...etched onto the reference card.

In another preferred embodiment of the present invention, the click **account** can be used to offer a form of **transaction** satisfaction to the customer. Specifically, a purchase **transaction** conducted over the **Internet** using the click **account** of the present invention can 'be a customer with one or more of four different...

...available at a lower price within a period of time from the date of the **transaction** , the customer can request a refund from the creditor. As will be appreciated, in

7...

...refund can be set at \$1000 per item, with an upper limit of \$5000 per **account** per year. In another preferred embodiment, the period of time for requesting the refund can...

...that, if a customer is dissatisfied with the product purchased by means of the click **account**, and the party from whom the product was bought will not accept the product back...

...purchase for a refund if the refund is requested within 90 days of the purchase **transaction**. In a preferred embodiment, the upper limit for a refund can be set at \$ 1 000 per item, with an upper limit of \$5000 per **account** per year.
The third guarantee of customer satisfaction is an extended warranty. The extended warranty...

...is a purchase assurance guarantee.

With this guarantee, if a purchase made with the click **account** is damaged, stolen, or destroyed in a fire within 90 days from the date of ...

...refund can be set at \$1000 per item, with an upper limit of \$5000 per **account** per year.

In another preferred embodiment of the present system and method of conducting financial **transactions** over the **Internet**, the creditor offers financial incentives for the use of the click **account**. For example, the creditor could offer financial rewards tied to the use of 8

the click **account**. In a preferred embodiment, use of the click **account** could result in a corresponding award of frequent flier miles from one or more airlines. In another preferred embodiment of the present invention, the creditor could offer a small **cash** -back award for use of the click **account**. For example, the creditor could offer 1% or 2% **cash** -back to the customer on purchases made using the click **account**.

In another preferred embodiment of the present invention, the click **account** provides three (3) product benefits: security, convenience and shopping peace of mind.

With regard to security, the click **account** can furnish both an **on - line** purchase guarantee and a privacy promise. With the **online** purchase guarantee, a click **account** holder will never lose a penny shopping on the **web**. The **online** guarantee ensures that if an **account** is ever compromised, the **account** holder will not be held responsible for charges made by unauthorized users. In addition, with the privacy promise, information regarding the click **account** or the click **account** holder will not be divulged to third parties without cause.

With regard to convenience, the click **account** offers many benefits. The click **account** is an **Internet** dedicated **account**. Thus, an **account** holder is able to have all his/her **Internet transactions** in one place, simplifying record keeping and adding to security. The

C) 16-n

click **account** also provides **online account** management. Here, an **account** holder can save time by going **online** to get information about his/her **account** (s). This **online account** management capability permits the **account** holder to check their balance, find his/her next **billin** date and amount due, and **pay** his/her **bills**. In addition, if there is ever a **billing** problem regarding merchandise purchased **online**, the **account** issuer can intervene to try to help **settle** the dispute. Additional benefits regarding convenience are **billing** dispute resolution, fraud early warning capability, and the ability to authorize additional users.

Concerning shopping peace of mind, the click **account** also provides significant advantages. These include (1) extended warranty, (2) price protection, (3) satisfaction guarantee...

...original U.S. warranty up to one additional year for items purchased

with the click **account**. The price protection, in an embodiment, could assure an **account** holder that he/she is getting the best advertised price on all **Internet** purchases. If the

9

same item, from the same manufacturer, is advertised for a lower price within 60 days of the purchase, the **account** holder will be refunded the difference up to \$1,000 per item, up to a limit of \$5,000 per **account** per year. The satisfaction guarantee, in an embodiment, can provide 100% money back guarantee on every **online** purchase. If the **Internet** merchant does not accept a return, the issuer will cover the return up to \$1...

...The purchase assurance, in another embodiment, provides that, if a purchase made with a click **account** is damaged, stolen, or destroyed in a fire within 90 days from the date of purchase, the cost of the purchase will be refunded to the **account** holder.

It will be appreciated that the click **account** can be used in conjunction with another **Internet** system termed the **electronic** wallet. The system and method of the **electronic** wallet allows a customer to prepopulate an order form when he or she is shopping

ID
on the **Internet** with his or her address, telephone number, e-mail address, **credit card** or line of credit information, shipping address, password, and other information customarily requested on an **Internet** order form.

Various preferred embodiments of the invention have been described in fulfillment of the...

Claim

1 A method for facilitating **electronic** commerce, comprising the steps of: issuing an **electronic** commerce card to a customer during a registration phase,

C)

and

performing a **electronic** commerce transaction, wherein the **electronic** commerce card provides capability for credit reallocation capability, **online account** management, satisfaction guarantees, and financial incentives. The method for facilitating **electronic** commerce according to claim 1, wherein the **electronic** commerce card is used only for **electronic** commerce.

3 An **electronic** commerce card embodiment on a computer-readable medium that is created as a result of...

...steps in the method as recited in claim 2.

6 A method for utilizing an **online** commerce card in conducting **online** commerce transactions between a customer and a merchant, comprising the following steps: issuing an **electronic** commerce card to a customer during a registration phase,

and

performing a **electronic** commerce transaction, wherein the **electronic** commerce card provides capability for credit reallocation capability, **online account** management, satisfaction guarantees, and financial incentives.

The method for utilizing an **online** commerce card in conducting **online** commerce

transactions between a customer and a merchant according to claim 6, wherein the **electronic** commerce card is used only for **electronic** commerce. 5. A computer-implemented method for handling **online** commerce transaction, comprising the following steps:
issuing an **electronic** commerce card to a customer during a registration phase,
and

performing a **electronic** commerce **transaction** ,
wherein the **electronic** commerce card provides capability for credit
reallocation capability, **online** **account** management, satisfaction
guarantees, and financial incentives.

9 The computer-implemented method for handling **online** commerce
transaction according to claim 8, wherein the **electronic** commerce card
is used only for **electronic** commerce.

10 A computer-readable medium having computer-executable instructions for
performing the steps in...

...in the computer-implemented method as recited in claim 9.

12 A system for facilitating **online** commerce, comprising:
a customer computing unit resident at a customer site, the customer
computing unit being configured with an **online** commerce card for use in
online commerce **transactions** , the **online** commerce card being
associated with a customer **account** number; an authority computing
system resident at an authority site, the authority
computing system having a database to hold the customer **account** number;

12
the customer computing unit being configured to use the customer **account**
number in an **online** commerce **transaction** with a merchant; and
the authority computing system being configured to receive from the
merchant an authorization request for approval of the **transaction** , the
authority computing system using the customer **account** number to process
the authorization request.

13 The system for facilitating **online** commerce according to claim 8,
wherein the **electronic** commerce card is used only for **electronic**
commerce.

Title: Cyberconsumption taxes and electronic collection systems: a canonical consumer-delivered sales tax

Author(s): Jae Kyu Lee; Yeoul Hwangbo

Journal: International Journal of Electronic Commerce vol.4, no.2

p.61-82

Publisher: M.E. Sharpe,

Publication Date: Winter 1999-2000 Country of Publication: USA

Language: English Document Type: Journal Paper (JP)

Treatment: Practical (P)

Abstract: This study analyzes existing consumption tax systems and proposes a new cyberconsumption tax policy called the consumer-delivered sales tax (CDS tax) for use in the electronic commerce environment. The CDS tax has the characteristics of a sales tax, but is remitted directly by the consumer without the intervention of the supplier. Seven criteria are laid out for use in designing an acceptable cybertax system: the system should be equitable and simple, ensure user confidence, prevent tax evasion and economic distortion, maintain a fair balance among countries, and not introduce a new form of taxation. All of these goals are satisfied by a version of the CDS tax termed the canonical CDS tax. The taxation agency in the supplier's country imposes the canonical CDS tax on consumers in a manner that is consistent in both physical- and cyberspace. The merchant's software issues a tax bill to the consumer's personal computer (PC) together with the bill for the consumer's purchase. The consumer pays the total amount, and the tax portion of the payment is transferred to the account of the consumer's tax agency in a consumer-designated bank. The study shows that the canonical CDS tax system can be implemented using ordinary electronic payment systems, such as **electronic fund transfers**, **electronic credit cards** and **electronic cash**. It also demonstrates that the canonical CDS tax system can coexist with traditional consumption tax systems, such as the sales tax and the value-added tax. (28 Refs)

Title: All about the euro?

Author(s): Violino, B.

Journal: InformationWeek no.51 p.27-8

Publisher: Emap Computing & CMP Media Inc,

Publication Date: 20 Jan. 1999 Country of Publication: UK

CODEN: INFWF5

Material Identity Number: G220-1999-002

Language: English Document Type: Journal Paper (JP)

Treatment: Economic aspects (E)

Abstract: The first phase of the euro kicked in on January 1, with 11 of the 15 European Union countries standardising on the currency for non-cash

transactions, such as **credit card** and cheque **payments**, invoices, **electronic funds transfer** and stock pricing. Despite such a profound change in the European market, which threatens to affect everything from financial systems to supply chains, many companies are taking a wait-and-see approach. Some are even ignoring the euro altogether. Yet, those US firms aggressively preparing for the euro have spotted a golden opportunity to gain an edge on the competition in Europe, simply by being ready to handle the new currency. Chase Manhattan, State Street **Bank**, Case, Ford Motor and Tektronics are among the US-based multinationals spending millions of dollars and devoting staff to the changeover, making euro readiness a priority. But these companies appear to be the exception.

Title: Bank of Scotland and MATRIX ATMs join forces

Author(s): Essinger, J.

Journal: Electronic Banking & Finance vol.5, no.2 p.10-12

Publication Date: April 1988 Country of Publication: Netherlands

CODEN: EBFIE4 ISSN: 0265-9239

Language: English Document Type: Journal Paper (JP)

Treatment: General, Review (G)

Abstract: The new set-up, which will be open to all MATRIX and **Bank** of Scotland card-holders from the outset, represents the first time that MATRIX has opened its network to a clearing **bank** and also the first time that the **Bank** of Scotland has opened its network to any building societies. The link-up will benefit both organisations in the spread of ATMs available. **Bank** of Scotland has 300 ATMs in Scotland and 12 in the rest of Britain. MATRIX has 40 ATMs in Scotland and 610 elsewhere. Massive financial advantages also accrue even to large organisations which choose to **share** their **ATM networks** rather than simply **pay** to install more of their own ATMs. (0 Refs)

Title: Check writing up 6%

Author(s): Lipis, A.H.

Journal: Bank Systems & Equipment vol.23, no.8 p.60B-2

Publication Date: Aug. 1986 Country of Publication: USA

CODEN: BSEQD6 ISSN: 0146-0900

Language: English Document Type: Journal Paper (JP)

Treatment: General, Review (G)

Abstract: Despite earlier predictions that consumer check writing would decline in growth throughout the first half of the 1980s, checks have continued to grow at about the same rate as the 1970s. It appears that EFT is becoming more expensive than writing checks as a direct result of **shared ATM networks** where **ATM** owners are collecting **transaction** fees of 50 cents or more. **ATM** growth is likely to be significantly curtailed and total EFT growth will be similarly affected because of the large volume percentage represented by **ATMs**. The **banking** industry needs to rethink its EFT pricing strategy. (0 Refs)

Title: Payment systems focus: positive rewards

Author(s): Demaree, S.W.

Journal: Magazine of Bank Administration vol.61, no.11 p.8-10

Publication Date: Nov. 1985 Country of Publication: USA

CODEN: MBAAA5 ISSN: 0024-9823

Language: English Document Type: Journal Paper (JP)

Treatment: General, Review (G)

Abstract: After some 20 years of having terminals in place, the challenge of how to motivate customers to use automated teller machines remains unresolved. To generate volume, **bankers** must reward customers who take advantage of self-service **banking** and use the **ATM**. The reward must be positive, but it can come in many forms. The cost structure itself is not important. Rather the value saved when customers use an **ATM** should be the prime motivator. The management of MPACT, one of the nation's largest **shared ATM networks**, is convinced **transaction** volume would be 30% to 40% if its members refrained from charging their customers for interchange transactions. Title: An impulse to move more money (building societies)

Journal: Banking World vol.3, no.5 p.58

Publication Date: May 1985 Country of Publication: UK

CODEN: BAWOEX ISSN: 0737-6413

Language: English Document Type: Journal Paper (JP)

Treatment: Applications (A); General, Review (G)

Abstract: The building societies are this year launching their major bid to stake out a place as a retail **banking** institution. The convergence of low-cost computing power and high-speed telecommunications, the societies believe, has removed the **banks** ' ancient monopoly of storing and moving people's funds. If customers are going to choose to hold deposits with institutions that can handle money transmission, then societies are determined to harness technology to provide this service. The key to the whole process, they believe, is the provision of 24-hour access to **cash** , through **networks** of **shared** ATMs. Two **ATM** networks, serving 14 and 7 institutions respectively, are under construction. First off the ground is Link, which with 800 machines is set to be third largest network in the UK. Link is, in fact, a federation of **financial institutions** . There are four major partners: National Girobank (180 machines); Cooperative **Bank** (50 machines); Abbey National (220 machines) and Nationwide (120 machines). The other network is EFT, which is to link machines run by seven societies in a network run by IBM. The seven member societies are: Alliance and Leicester (shortly to merge into one society); Leeds; Woolwich; National and Provincial; Anglia and Bradford & Bingley (all included in the top ten societies). EFT will be open for business in the autumn of 1985, with 125 machines, rising to 225 after six months. (0 Refs)

Cash-in-hand or e-cash on the Internet -- It's the same difference

Hewitt, Michael J

LINK-UP , November 1, 1994 , v11 n6 p14, 1 Page(s)

ISSN: 0739-988X

Company Name: DigiCash

Product Name: E-Cash

Languages: English

Document Type: Feature Articles and News

Geographic Location: United States

Discusses DigiCash's E-Cash, a system of digital cash, also called virtual cash. Says once the system becomes fully established, users will be able to send money over the Internet as securely and easily as sending electronic mail. The basic procedure to access E-Cash is to enter credit card or **bank** account details online, then withdraw as needed after entering the correct password. E-Cash is stored online until the user finds an online retailer willing to honor it. Predicts it will be used for small sums, or where checks are impractical. Adds that E-Cash surcharges will be less than those imposed on **credit card** purchases. Says excess **E - Cash funds** can be returned to the users' accounts. (LDS)

Trading pen for machine -- Small business processes credit cards electronically

Steeves, Ryan

PC Today , January 1, 1994 , v8 n1 p31, 1 Page(s)

ISSN: 1040-6484

Company Name: Balloon-A-Tune; Via Systems

Languages: English

Document Type: Feature Articles and News

Geographic Location: United States

Extols the benefits of electronic credit card processing through the story of Balloon-A-Tune in Wichita, KS. This small business used to have to manually write out phone orders (a majority of their business), call an 800 number for acceptance, write more transaction information, add up all the receipts, take them to the **bank**, and pay a 3.9% fee on all credit card sales. Since obtaining their electronic processing machine (which the owner got for free from the **bank** by complaining that they got enough of his credit card sales) he now only punches a few keys and **transactions** are verified and processed with **deposits** made **electronically**. His **credit card** fees are now 3.41% and he now has more time to deliver telegrams in a gorilla suit. Points out that VISA and MasterCard will soon require that all credit card transactions be verified. Says that electronic processors usually cost between \$300 to \$800. Contains two photos. (GEC)

PayPal and PayMyBills.com' payMe.com are new services that allow consumers to e-mail real money using credit cards to pay for goods and services purchased on the Internet. The way a person's account is funded depends on the service. PayPal uses a consumer's voided check for direct withdrawal, payMe.com is provided with a credit card number from the user, and X.com, an Internet **bank**, is already set up for direct transfers for its customers. Other features are offered by the services. PayPal lets several people be billed at once, PayMe.com allows individual invoicing, and X.com will automatically bill the highest bidder in an auction after it closes. None of these services can offer all the benefits that their offline counterparts do. There are some elements of the e-cash services that online shoppers should be aware of.

Wells Fargo recently acquired a stake in Billpoint, an online- payment technology owned by eBay, and now the **bank** will be processing credit card transactions and providing customer support for eBay customers. While Billpoint will be marketing only to eBay for now, it will soon widen its services to include areas like business-to-consumer commerce. X.com and PayPal have also teamed up to combine their online **payment** technology that centers on **electronic funds transfers** rather than **credit card payments** . While PayPal is now the leading payment system on eBay, the auction site will market Billpoint as the preferred payment option, but will allow other electronic payment services. People will be watching the auction sites, and if person-to-person payment is successful, other organizations will be sure to follow.

A panel of financial services experts recently dispelled the notion that emerging electronic bill payment technologies and services will likely replace traditional cash, check, and credit card services in the near future. Despite a growing demand among consumers to use e-payment systems such as smart cards, e-checks, and electronic purses, a lack of industry standards and weak value (in comparison to traditional payment methods) are keeping the technology from progressing as quickly as consumers would like it to. Similarly, the establishment of traditional credit card payment e-commerce systems online makes it tougher for businesses to strip it all down and start over after conquering consumer fears over online credit card security and fraud. Experts predict that credit cards will remain the dominant payment method for the Web for the short to medium term future.

Bottomline Technologies' EPIC-Enterprise, an electronic payment interchange and conversion system, will soon permit Paymentech, a **credit card transaction** processor, to **transfer electronic payments** via the national Automated Clearing House (ACH) network. ACH transfers are less expensive than checks or wire transfers, and all ACH transactions have settlement dates that determine when funds are available. Paymentech will include EPIC in payment software provided to customers, and no interruptions will occur in use of existing financial software. Users of the services include corporations who want to speed up payment of employee expense reports, because some **banks** view the waiting period for checks to be too long. If the particular EPIC-Enterprise user has to process many corporate credit card statements from many traveling employees, EPIC tracks all the accounts. Other topics discussed include Sabre Decision Technologies' use of Borland's Delphi to code a linked meeting scheduler that runs on Hewlett-Packard's systems, and Barnett **Banks** ' use of the World Wide Web to provide full-service, real-time **banking** to customers. Barnett will also use IBM's Business Recovery suite disaster recovery software. The tool includes software that assists in tracking applications and sends Barnett Technologies' director of business recovery an e-mail when 90 days pass without a system outage.

CheckFree Technologies is hoping to raise \$50 million through an initial public offering of common stock. However, some of the company's biggest investors are using the IPO as an opportunity to sell off **shares**. CheckFree processes **electronic commercial transactions** for consumers, **credit card** companies, and **banks**. The company plans to sell 3.76 million shares, and current shareholders will sell 2.24 million. The firm's

prospectus does not list a specific use for the funds. At the initial offering price of \$15 per share, the company would be valued at \$506 million, which is 13 times its 1994 revenue. CheckFree has made several agreements with other companies to integrate its services into other products, including accounting software and Internet browsers.

Use of credit cards reptdly is undergoing change but revisions in system are in initial stages and impact on consumers and financial insts is uncertain. New debit card, or asset card, is being issued by some banks . Activates system that deducts payment from customer's bank acct almost instantly, rather than familiar credit card method that allows consumer to pay later. Is seen as key to complete electronic funds transfer system. Master Charge unit Interbank Card Assn introduces debit card called Signet. Other major card system Natl BankAmericard Inc is merging its debit card Entree into its new Visa program. Bankers note trend toward levying charges for cards, once issued free. Natl BankAmericard pres D W Hock notes more banks are issuing both cos' cards. Cautions that merging systems would reduce competition. Use smart cards to check illegal withdrawals
MALAYSIA: SMART-CHIP ATM CARDS IN THE FUTURE?
New Straits Times (XAS) 13 Apr 2000 p.5
Language: ENGLISH

To curb the current cases of automated **teller machine (ATM)** card frauds, **shared ATM network** provider Malaysian Electronic Payment System Sdn Bhd (MEPS) said that **banks** should keep pace with technology

and introduce ATM cards with smart-chips to replace cards with magnetic strips. Unlike magnetic strip-cards, the smart cards cannot be tampered with, allow data to be encrypted and provide secure ATM-to-host computer transactions, said MEPS general manager Dr Md Khir Abdul Rahman. However, **banks** would first need to install smart card-compatible ATMs before issuing such cards. This expensive move would involve system upgrades but **banks** are expected to change to the secure system in due course. Among the crop of **banks** in Malaysia, only **Bank Islam** issues cards with smart-chips at present.

DBS scores a first with Net kiosks for customers

SINGAPORE: DBS OFFERS INTERNET KIOSKS

Business Times (XBA) 25 Mar 1999 p.4

Language: ENGLISH

Singapore's DBS Bank has unveiled Internet kiosks where its customers - even those without Internet accounts - can carry out banking transactions using their ATM (automated teller machine) cards. By inserting their ATM cards in a slot, customers can use the touch-screen terminals for transactions like transferring funds, making Sing dollar and CPF fixed deposit placements and making bill payments. Customers can also carry out tasks not possible with ATMs, like printing out a transaction history, applying for or terminating a bill payment, changing personal particulars, making remittances like demand drafts or travellers' cheques and enquiring for IPO results. Customers can also get the latest news updates or use Interactive Calculators to simulate loan quantum and monthly payments - two services that do not need an ATM card and are hence open to non-DBS customers. The security features of the new service are the ATM cards and the personal identification number (PIN) that users have to enter. The Internet kiosks allow the bank to offer customers with 24-hour self-service banking, seven days a week with regular updates. The bank intends to have 50 such kiosks. Each kiosk costs around S\$ 30,000 or around S\$ 10,000 less than an ATM.

VBB erhvhen 1996 Tarife f|r PendlerHvhere Fahrkartenpreise f|r Pendl\

AUSTRIA: ELECTRONIC PAYMENT FOR TRAIN TICKETS
Die Presse (XGO) 14/15 Oct 1995 p.21, and DerStandard, 16 Oct 1995, p.13
Language: GERMAN

The Austrian national railway company VBB is to introduce new tariff structure in passenger transport in the first quarter of 1996. Especially commuters will be affected by fare increases, which are expected to raise VBB ticket revenues in 1996 by 1.5-1.7%. The tariff structure is to become more transparent, and subsidised fares for special groups, such as pensioners and school-children, will rise. VBB is not, however, planning to follow Deutsche Bahn's example and charge higher fares for rush hours. In the second half of 1996 VBB is to introduce a rail card. The company has held talks with Citicorp and **Bank Austria** about the introduction of a chip card, which can be used as a **credit card** and for **cash withdrawals**. **Electronic banking** centres are to be established in collaboration with **banks** at the biggest railway stations.

Money deposit machines can classify **banknotes** with different denomin\
HONG KONG: MONEY DEPOSIT MACHINES
HK Economic Journal (XKG) 7 Aug 1995 p.4
Language: CHINESE

In Hong Kong, HongKongBank and Hang Seng **Bank** are setting up money deposit machines in their branches. With respect to HongKongBank, more than 130 money deposit machines are operative. Hang Seng **Bank** has set up 22 units so far. Every new branch of Hang Seng **Bank** will have money deposit machines in the future. Hang Seng **Bank** estimated that 28 machines will be in service by early 1996. This money deposit machine is provided by a manufacturer named Siemens Nixdorf. HongKongBank and Hang Seng **Bank** have bought a total of 192 units from Siemens Nixdorf although not all of them are in service yet. This machine model can recognise major currencies and **bank** notes with 75 different denominations. Receipts for transactions are given to depositors. Consumers in Hong Kong still prefer deposit money through counters to automatic money deposit machines. According to HongKongBank, although its ATM machines have the function of cash and cheque deposit, 75% of the 400,000 transactions per day is money withdrawal and only 25% is other services like money transfer and deposit. *

Nets chalks up 25pc rise in consumer spending to \$1.44b
SINGAPORE: SD 1.44 BN IN SPENDING VIA NETS
Business Times (XBA) 24 Jan 1994 p.2
Language: ENGLISH

The general manager of the Network for Electronic Transfers (Singapore), Patrick Yi, revealed that consumer spending via Nets rose by 25% to SD 1.44 bn in 1993. In addition, the volume of transactions made via the system increased by 44% to 24.35 mn in 1993 compared to 16.88 mn in 1992. The number of Nets terminals at retail outlets has also raised from 1992's 5,743 to 7,757 in 1993. The Nets system enables customers with ATM (**debit**) cards from participating **banks** to make **payment** for purchases using the **Electronic Funds Transfer** at Point of Sale services. In Singapore, the **banks** participating in the service are DBS **Bank** , OCBC **Bank** , Overseas United **Bank** , United Overseas **Bank** , POSB, Tat Lee **Bank** and Keppel **Bank** .

British insurer follows simple route in race to top of auto sector
UK: DIRECT LINE GROWING APACE
Wall Street Journal Europe (WSJ) 04 Aug 1993 p.1
Language: ENGLISH

The article discusses the recent success of a UK car insurer, Direct Line - a telephone-based service now wholly owned by the Royal Bank . The company has concentrated on providing a low-cost product through the elimination of clerical costs (only accepting payment by electronic bank transfer and credit card) and in having no agents. The firm has also stuck to low-risk business and the use of simple-to-operate data systems. Direct Line now holds around 6% of the UK car insurance market and has also branched out into household insurance. However, the article warns that the company may become a victim of its own success, either through having to accept higher-risk business to ensure further growth or through competition from firms imitating their service.

Abbey charges for using others' cash machines
UK: ABBEY TO CHARGE ON SOME LINK MACHINES
Sunday Times (ST) 06 June 1993 p.s4p3
Language: ENGLISH

Abbey National will begin charging customers who use their cash cards to withdraw cash from other institutions' Link ATMs, on 07 June 1993. The Link network of ATMs consists of almost 6,000 machines operated by 32 members and Abbey will charge 60p/transaction for every withdrawal from another Link member's machine, although withdrawals from Abbey's two cheque accounts will be exempt from the new charges. Savers aged under 18 years will also be exempt. Abbey National has a network of almost 1,000 ATMs and less than 4% of customers use other Link machines, according to a spokesman.

Small retailers face higher card charges from Barclays **bank**
UK - BARCLAYS RAISES SMALL RETAILER CARD CHARGES
Financial Times (C) 1993 (FT) 6 April 1993 p1

BARCLAYS **bank** has told about 40,000 small retailers that the amount they are charged for each credit card purchase is to rise by 8 per cent from this month unless they pay Pounds 35 a month to rent electronic card checking machines from the **bank**. The increase is part of an effort by high street **banks** to raise charges to retailers for card transactions because their card-handling subsidiaries - known as merchant acquirers - have been making only small profits, or losses. Barclays has told half of the 80,000 small customers of its merchant acquirer that credit card transaction charges - which are between 1.2 and 4.5 per cent of purchase value - will rise 8 per cent unless they switch to **electronic checking**. It has also raised its **charges** by 1.4p per **debit card** transaction. It says this equals an average rise of 4 per cent for smaller retailers, who were paying between 20p and 60p per transaction before the rise in charges last week.**

Wilmington Savings Fund Society, FSB (WSFS) Announces Pending Launch of Internet-Only Banking Subsidiary and Investment in CustomerOne Financial Network, Inc.

PR NEWSWIRE

September 07, 1999

JOURNAL CODE: WPRW LANGUAGE: English RECORD TYPE: FULLTEXT
WORD COUNT: 861

WILMINGTON, Del., Sept. 7 /PRNewswire/ -- WSFS Financial Corporation (Nasdaq: WSFS), through its primary subsidiary, WSFS, FSB (WSFS), is pleased to announce the anticipated launch of its new everbank.com(TM) subsidiary, marking a significant entrance into the rapidly emerging Internet-only banking sector.

To achieve its objective of offering high value Internet-only banking to a national clientele, WSFS has made a \$5.5 million investment in CustomerOne Financial Network, Inc. (ClFN), a company formed in early 1998 for the express purpose of providing direct-to-consumer marketing, servicing, internet development and technology management for "branchless" financial services. With its investment, WSFS is an approximately 25% owner and the largest single shareholder in ClFN, and has received warrants for the purchase of an additional 20% ownership. WSFS has the opportunity, and under certain circumstances, the obligation, to invest an additional \$5.4 million in ClFN, at current offered ownership prices.

Under the planned structure, which requires Office of Thrift Supervision (OTS) approval, ClFN's Internet-only banking infrastructure will become part of everbank.com(TM), a wholly controlled subsidiary of WSFS. Collectively, the combined management of the new everbank.com(TM) subsidiary will have over 125 years experience in direct marketing and the management of remote clientele for banking and financial services. It's planned that everbank.com(TM) customers, through the Internet and a 24 hours a day, seven days a week live call center, will be provided a full array of superior value products, including deposit accounts, secure web banking, online bill payment, credit cards and instant decision home loans. Through ClFN, brokerage, investment advisory services and insurance quote services will be available.

"Developments over the past year have convinced us that Internet-only banking will be a significant part of the future of financial services. We also understand the very specialized skills and dedicated focus needed to make a fully branchless Internet-only banking operation a success," said WSFS Chairman, President and CEO, Marvin Schoenhals, adding, "We are also aware that it is difficult to develop these skills and focus inside a traditional branch-bank environment. We believe the management expertise of the new everbank.com(TM) subsidiary will offer WSFS a rapid and effective entrance into this market. What's more, this will be done in a targeted way, so as to preserve not only the integrity of WSFS, the successful community bank that has been built over the last 167 years, but also our current WSFS Bank Internet delivery channel, NetConnect(SM), which was rolled out to our traditional WSFS customers last month."

According to a June 1999 study by Goldman Sachs, only 4 percent of US households currently use online banking. The report goes on to forecast that the number of online bank customers is expected to jump to about 20% of all US households by 2002.

Everbank.com(TM) plans to focus the marketing efforts on higher net worth individuals who have demonstrated their comfort with remotely fulfilled, self-directed financial services. "The target market consists of approximately 4 to 5 million individuals, and we hope to capture a 4 to 5 percent market share. The business plan is extremely focused, and members of the everbank.com(TM) management team have, in prior careers, spent the last 15 to 20 years catering to, and successfully selling to this profitable niche," says Frank O. Trotter, Chairman and President of ClFN.

Subject to regulatory approval, WSFS expects to roll out everbank.com(TM) to the public in the fourth quarter of 1999. Commensurate with the operations of a new venture, WSFS expects its costs and early operating losses to be approximately \$.01 to \$.02 per share, per quarter

through the startup phase, which begins in the third quarter of 1999 and is expected to last two to four quarters.

WSFS Financial Corporation is a \$1.7 billion financial services company. Its principal subsidiary, WSFS, operates twenty-three retail-banking offices in New Castle County and Dover, Delaware, as well as Chester, Delaware, and Montgomery Counties in Pennsylvania. Other operating subsidiaries include WSFS Credit Corporation; Community Credit Corporation; and 838 Investment Group, Inc. For more information, please visit the Company's website at www.wsfsbank.com.

This release contains forward-looking statements, within the meaning of the Private Securities Litigation Reform Act, that involve risk and uncertainty. It should be noted that a variety of factors could cause actual results to differ materially from the anticipated results or other expectations expressed in the Company's forward-looking statements. The risks and uncertainties include, but are not limited to, regulatory approvals, the growth of the economy, interest rate movements, timely development of technology enhancements for its products and operating systems, the impact of competitive products, services and pricing, customer-based requirements, Congressional legislation, and similar matters. Readers of this release are cautioned not to place undue reliance on forward-looking statements which are subject to influence by the named risk factors and unanticipated future events. Actual results, accordingly, may differ materially from management expectations. WSFS Financial Corporation does not undertake and specifically disclaims any obligation, to publicly release the result of any revisions that may be made to any forward-looking statements to reflect the occurrence of anticipated or unanticipated events or circumstances after the date of such statements.
